

Nothing beats the beauty of natural Stone and a headline.

Travertine is considered a "green product" Nothing beats the array of styles and colours and the durability of natural stone.

It is the only range of tiles that cannot be discontinued. Travertine is a form of a limestone Travertine, Are calcium based stones Travertine is finer than limestone but not as fine as marble created over millions of years as Organic Matter, Build up Travertine is a massive concretionary form of calcium carbonate, CaCO₃ which is a result of depositions by springs (especially hot bubbly mineral rich springs) or rivers saturated with calcium carbonate. When carbon dioxide rich water percolates through rocks in limestone areas, the water dissolves the limestone and the water becomes semi-crystalline.
